

Enterprise Solutions

Comprehensive severe weather intelligence for planning, detection, response and recovery

Planning Keep Them Safe

- Identify all potential weather threats
- Prepare action plans based on expected weather conditions
- Strategically position personnel and resources
- Reduce risk to employees and customers

Detection Leverage Your Weather

- Get the earliest possible warning of the potential for severe weather
- Receive instant severe weather alerts and custom notifications
- Visualize the weather in real-time at the neighborhood level
- Activate severe weather plans

Response Meteorological Support

- Identify where conditions are most severe
- Deploy crews and equipment where they are needed most
- Determine whether to evacuate and what to communicate to the public
- Maintain essential operations and services

Recovery Precision Data

- Identify where conditions are most severe
- Deploy crews and equipment where they are needed most
- Determine whether to evacuate and what to communicate to the public
- Maintain essential operations and services

The Weather Station is a commercial-grade weather station build to withstand all weather conditions. It is easily installed and measures 27 different weather measurements updated every 2 seconds. The Weather Station integrates with the following solutions to provide a comprehensive program for planning, detection, response and recovery.

Included with Weather Station

Weather Display

Prominently display your real-time weather conditions, camera, radar, forecast and more, on this 21" HD display.

WeatherBug Mobile

Be the real-time, hyper-local weather source in your neighborhood and help keep your community safe.

Online Weather Center

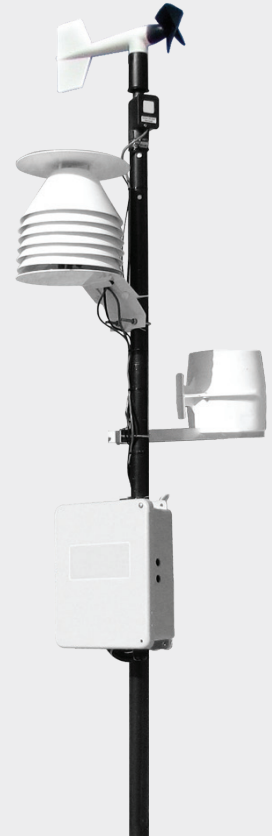

Turn your website into a valuable information resource for visitors and staff.

StreamerRT

Access more than 150 layers of real-time weather information and set up severe customized weather alerts. Access live data from an exclusive neighborhood-level network of more than 10,000 weather stations. This web-based weather intelligence platform brings the highest level of precision to the tracking and analysis of weather for rapid visualization and decision-making.

Meteorological Support Services

Use the same expert team that supports professional football and baseball teams for consultation on weather forecasts and approaching severe weather. Customized analysis and interpretation of the weather for your location are key in supporting major events and activities.

Optional Upgrades

Total Lightning and Alerting

Total Lightning and Alerting solutions integrate seamlessly with Weather Stations and into Earth Networks products.

- Lightning Sensor
- Lightning Visualization and Alerting Platform
- Earth Networks E-mail Alerts
- Indoor Alerting Device
- Outdoor Alerting System and Countdown Clock

HD Cameras

HD cameras integrate into Earth Networks solutions and provide a true picture of what's happening on the ground and help monitor assets for improved operations.

Both the stationary and pan/tilt/zoom cameras record sharp HD images perfect for creating time-lapse animations.
